

## **Abstract:**

Developing a e-commerce application using React, “Amazon-clone”. Now a days, every business needs to go online if they want to generate a good amount of revenue. Business likes restaurants, retail shops, stores etc. Earlier the amazon website was made up of HTML, CSS and JavaScript, but as revolution it also gets updated to the latest frameworks.

This project will be a functional clone of amazon e commerce website, using React and Firebase.

## **Features:**

Navigation bar, home page, login page, basket (cart), payment and authentication.
